SUMMARY

Final-year B.Tech (IT) undergraduate with strong Java fundamentals, hands-on experience building and deploying backend services and REST APIs, and a solid grounding in data structures and algorithms. Experienced with SQL and NoSQL databases, JWT-based authentication, and event-driven design with Kafka. Uses AI tools to write cleaner code and ship faster.

EDUCATION

B.Tech in Information Technology	2023 – 2027
Jaipur Engineering College and Research Centre, Jaipur	CGPA : 8.8

SKILLS

Languages : Java(core), SQL
Backend : Spring Boot, REST APIs
Databases : MySQL, MongoDB
Tools : Git, GitHub, Postman
Core CS : DSA, OOPs, DBMS, OS(basics), System Design(basics)

EXPERIENCE

Full Stack Developer Intern	May 2026 – June 2026
Yinolite Solution	MERN Stack

- Picked and independently built Skill-Bridge, a job portal, as my internship project, from API design and authentication to file uploads and deployment.
- Implemented the Node.js, Express, and MongoDB backend with JWT and Google OAuth 2.0 login, role-based access for recruiters and candidates, and Cloudinary resume uploads.

PROJECTS

Skill-Bridge : Job Portal System → [Github] [Live]	React.js, Node.js, MongoDB
---	----------------------------

- Built a job portal where recruiters post jobs and candidates apply, with role-based access, JWT authentication, and Google OAuth 2.0 login.
- Designed REST APIs for auth, job postings, applications, and profile management, organized into separate routes, controllers, and models on a Node.js, Express, and MongoDB backend.
- Integrated Cloudinary for resume uploads and deployed the app with a live demo. Used AI tools for boilerplate and UI work, while owning the API design, auth flows, and data model.

MindVault : Journal Management System → [Github]	Java, Spring Boot, Gemini API
---	-------------------------------

- Built a Spring Boot backend for a journaling app with JWT authentication (15-minute access tokens plus HTTP-only refresh cookies), role-based access, and layered REST APIs backed by MongoDB.
- Used Apache Kafka to run sentiment analysis asynchronously, so saving a journal entry returns immediately instead of waiting on the external AI call.
- Integrated the Gemini API for mood classification, with a local keyword-based fallback that keeps analysis working when the API fails or is rate-limited.

ACHIEVEMENTS & CERTIFICATIONS

- Solved **300+** DSA problems across LeetCode
- Earned a Java Development Certification. [\[Certificate\]](#)
- Published a review paper in **Pratibodh** titled **Impact of Technology on Education and Learning** [\[Paper\]](#).
- Organized the **Knowledge Knockout** technical fest (2024 & 2025).
