SUMMARY

Final-year B.Tech (IT) undergraduate with strong programming fundamentals in Java and MERN, hands-on experience building and deploying scalable web applications and REST APIs, and a solid grounding in data structures and algorithms. Comfortable working across the full stack — from custom front-end interfaces to back-end services and SQL/NoSQL databases. Actively uses AI tools to write cleaner code and ship faster.

EDUCATION

B.Tech in Information Technology	2023 – 2027
Jaipur Engineering College and Research Centre, Jaipur	CGPA : 8.8

SKILLS

Languages :	Java (Core), SQL
Frontend :	React.js, HTML5, CSS3
Backend & APIs :	Spring Boot 3, Node.js, RESTful APIs, JWT
Databases :	MySQL (SQL), MongoDB (NoSQL)
Tools & DevOps :	Git, GitHub Actions (CI/CD), Docker, JUnit, Postman
Fundamentals :	DSA, OOP, DBMS, System Design(HLD)

EXPERIENCE

Full Stack Developer Intern	May 2026 – June 2026
Yinolite Solution	MERN Stack

- Built custom back-end services and front-end features for a Job Portal System using React.js and Node.js, implementing 9+ RESTful API endpoints with JWT-based role-based access control to automate recruiter and candidate workflows.
- Designed a 3-collection MongoDB schema with optimized dynamic filtering; wrote integration and regression tests to identify and resolve issues before release, maintaining clean, modular, and self-sustaining code throughout.
- Leveraged AI coding tools (Claude, GitHub Copilot) to improve code quality and accelerate feature delivery across the full stack.

PROJECTS

Skill-Bridge : Job Portal System → [Github] [Live]	React.js, Node.js, Express.js, MongoDB
---	--

- Designed and deployed a full-stack web application with custom React.js front-end dashboards and Node.js back-end services, automating job posting and application workflows for recruiters and candidates with JWT and Google OAuth 2.0 authentication.
- Integrated Cloudinary for media management, implemented rate-limiting and input sanitization for security, and designed a normalized MongoDB schema with indexed queries for reliable, fast data retrieval at scale.

Distributed Order Processing System → [Github]	Java, Spring Boot, Kafka, Redis, MongoDB, Docker
---	--

- Built a distributed microservices backend using Spring Boot with Apache Kafka for async order processing, Redis for inventory locking and idempotency, and MongoDB for persistence — containerized with Docker Compose for one-command local deployment.
- Wrote a 50-thread concurrent race condition test to validate inventory correctness under high load; implemented idempotency service to prevent duplicate order processing — demonstrating production-grade reliability thinking.

ACHIEVEMENTS & CERTIFICATIONS

- Solved **400+** problems on LeetCode focusing on Data Structures & Algorithms
- Completed Java Development Certification [\[Certificate\]](#)
- Published a review paper in **Pratibodh** on **Impact of Technology on Education and Learning** [\[Paper\]](#).
- Coordinated the **Knowledge Knockout** tech fest (2024 & 2025), managing cross-functional team coordination and end-to-end event execution.
